

TECHNOLOGY IN FOREIGN LANGUAGE TEACHING

Lesson Plan

Student's name: Carolina Acevedo Mouawd and Richard Riaño

Group: Starters kids pre A1

Date: May 12th, 2026

Theme/Topic:

Colors and objects in the classroom

Duration: 60 minutes

Learning Objective (SMART):

By the end of the lesson, students will be able to identify and describe classroom objects and colors using the structure:

"It's a/an + object. It's + color."

through See–Hear–Say activities and AI-supported interaction, achieving at least 80% accuracy.

Know:

Students will know vocabulary related to basic colors such as red, blue, green, yellow, and black, as well as common classroom objects including book, chair, table, and pencil. They will also know simple grammatical structures used for description, such as "It's + color" and "It's a/an + object."

Understand: Students will understand that colors are used to describe objects in their environment and that language learning can be enhanced through a multisensory process that involves seeing, hearing, and speaking.

Be able to Do: Students will be able to identify and name colors and classroom objects, pronounce them correctly using the See–Hear–Say approach, and produce simple descriptive sentences such as "It's a book. It's blue."

Flipped Classroom Component: Before the lesson, students are introduced to basic vocabulary related to colors and classroom objects through a short digital resource shared by the teacher

Approach: This lesson follows a Communicative Language Teaching (CLT) approach supported by the *See–Hear–Say* methodology.

Methodology: Multisensory Learning (*See–Hear–Say*) + Task-Based Learning + AI-Supported Interaction

Main Target Skill: Speaking (basic oral production and interaction)

Problem Anticipation

Students may struggle to recall vocabulary or mix up word order when forming sentences. Some learners might rely on repetition without fully understanding meaning

There may also be differences in participation levels, with some students being more active than others during speaking activities. Additionally, distractions or lack of familiarity with digital tools could reduce engagement during the lesson.

Vocabulary:	Materials Required:
Colors: red, blue, green, yellow, black Classroom Objects: book, chair, table, pencil Target expressions: It's [color]. / What color is it? / I see [color]!	Computer or tablet, stable internet connection, access to the <i>See-It-Hear-It-Say-It</i> website, access to ChatGPT, virtual classroom (teams)

Flipped Classroom Component (Pre-Class – Google Classroom)

LMS Platform: Teams

Resources uploaded for students to explore before class:

Short introductory video on colors and classroom objects, link to the *See-It-Hear-It-Say-It* website, and a simple vocabulary list (colors and objects) shared through the virtual classroom platform.

Evidence of participation: Students' active participation during the virtual session, oral responses in speaking activities, interaction with ChatGPT, and completion of short descriptive tasks about classroom objects and colors shared in the virtual platform.

PRE-TASK (0–20 min) | Activate Prior Knowledge + Flipped Classroom Review

Activity 1 – Flipped Classroom Check-in (5 min): Teacher asks: *What colors and objects did you see before class?* Students respond. Teacher confirms vocabulary using simple images and models pronunciation (e.g., *book, chair, red, blue*).

Activity 2 – Digital Game Warm-Up: Plays.org Color Game (10 min): Teacher projects the *See-It-Hear-It-Say-It* website. Students observe colors (see), listen to pronunciation (hear), and repeat chorally (say). Teacher connects colors to classroom objects (e.g., *It's a red book*).

DURING-TASK (20–80 min) | Communicative Tasks + Hands-On Learning

Activity 3 – Presentation

Teacher presents key structures: *"It's + color"* and *"It's a/an + object."* Models examples with visuals and gestures. Students repeat and respond.

Activity 4 – Guided Practice

Teacher asks: *What is it? What color is it?* Students answer: *It's a pencil. It's yellow.* Teacher supports pronunciation and structure.

Activity 5 – AI Speaking Activity with ChatGPT (15 min):

Students interact with ChatGPT. AI asks: *What color is your book? What is blue in your classroom?* Students respond orally using target sentences.

POST-TASK (80–110 min) | Consolidation, Production & Feedback

Activity 6 – Communicative Practice

Students participate in a Students describe objects in their environment:
It's a chair. It's black.

Some students share with the class.

Activity 7 – Reflection

Teacher asks: *What new words did you learn? Which was easy or difficult?* Students briefly respond.

CLOSURE (110–120 min) | Reflection & Wrap-Up

Teacher leads a quick whole-class reflection:

- *What colors did we learn today?*
- *Which activity was your favorite?*

- Teacher reinforces the Flipped Classroom link: *Remember the video we watched at home? Now you know all those colors!*
- Students receive a sticker or digital badge on Google Classroom for participation.

Assessment

Formative Assessment (ongoing throughout lesson):

Teacher observation during Activities 4, 5, and 6: checks for correct identification and oral production of colors and classroom objects, as well as use of the structure *"It's a/an + object. It's + color."*

- Participation during ChatGPT interaction: teacher monitors students' ability to respond appropriately to simple AI questions about objects and colors.

Summative Assessment:

Final oral production (communicative practice): students describe at least **2–3 classroom objects with correct colors** independently.

- Accuracy target: students correctly use vocabulary and structure in at least **80% of their responses**.

Technology Integration

The lesson integrates ICT tools to support multisensory and communicative learning. The *See–It–Hear–It–Say–It* website is used to provide visual and auditory input, allowing students to recognize and repeat vocabulary through an interactive approach. ChatGPT is incorporated as an AI tool to facilitate real-time speaking practice, where students respond to questions about colors and classroom objects in a communicative context. The virtual classroom platform (Teams) enables interaction, participation, and monitoring of student performance throughout the lesson.
