

The role of Technology

EFL SETTINGS

Foundation of Digital Learning

Transition from CALL to MALL and TELL

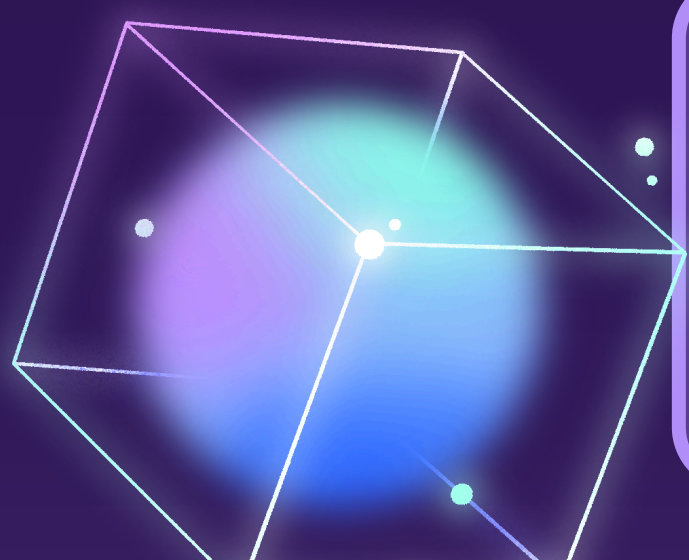

Technology has evolved from simple computer exercises to mobile apps and fully integrated environments that allow us to learn anywhere at any time.

Virtual environments and resources

Tools like Google classroom and VR/AR

LMS helps organize our classes, while virtual and augmented reality provide immersive spaces to practice in real-world scenarios.

Impact and instructional strategies

Gamification and active learning

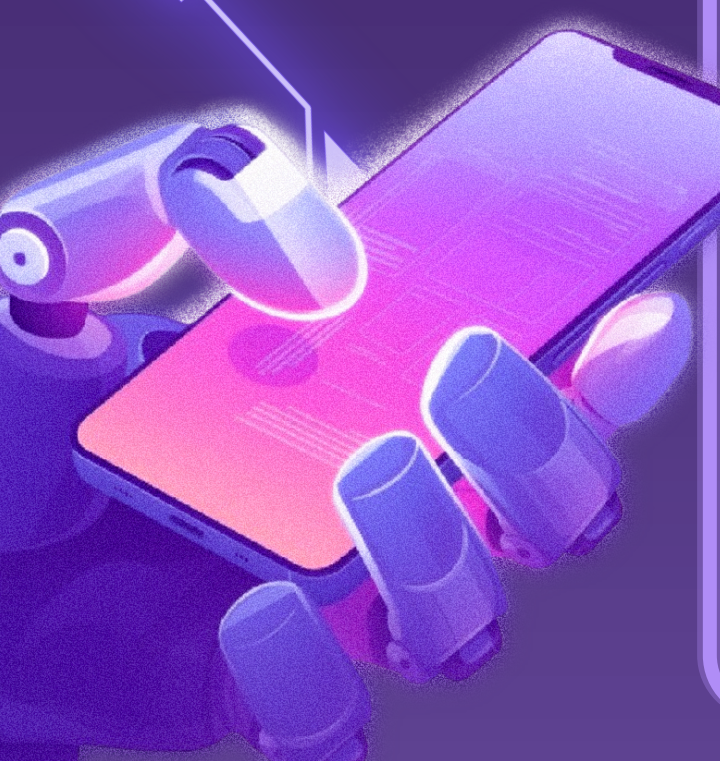

Using games (gamification) increases student motivation; these strategies encourage active learning where students take control of their own progress rather than just listening to a lecture.

Current challenges

Digital divide and distractions

While technology is helpful, we must face challenges like poor internet connectivity and distractions of social media during our study time.
